

TTI MOBILE PRINTING SERVICE by ePRINTit™

TTI offers a **Cloud Based Remote** Printing solution that makes it easy to print remotely from the guest's phone, tablet, laptop or other mobile device with a secure, easy to use application that can be used on any ePRINTit™ enabled printer. **Guest can submit their document through a web portal, mobile app or by email and receive a release code immediately.** No more searching for the exact printer on a web site.

ePRINTit™ is significantly better than the competition

- 256 bit encryption vs. 128 bit
- Files sent in PDF format vs. jpeg
- Upload and send up to 30 files under 1 access code vs. 1 file per code
- Easy to Use for non-technical guests
- Over 15 Million users have the mobile app (not needed) on their phones and very popular with millennials
- **See More information at this link:** <https://www.ttitel.com/eprintit/>

TTI's Mobile Printing Solution can be used in a Business Center or as a stand-alone system with a tablet connected to most any printer. From any mobile device

1. Select your files
2. Email to ttitel@eprintservice.com or if you have the Free Mobile App send direct from app.
3. Receive secure release code
4. Enter code in business center application or on tablet connected to printer
5. Documents preview and print securely

Or Guest can scan QR Code on front of printer: <https://tti.eprintit.com/portal/#/ppl/upload/Hotel>

EPRINTit™ is a transactional pull printing model. Once a job is sent to a print provider by one of the ePRINTit™ printing client applications the user receives a job release code. This code is valid for a limited time period and is the only requirement to print the job associated to that provider. No printed pages are left unattended at printer. You receive one code for all documents sent and you choose at the printer which ones you want, how many copies, color, 1 or 2 sides.

No logins or passwords are required. Release code only gives access to the content belonging to a single request, so there is no need to access or browse through a complete file set, limiting the reach of any given print session. We are developing a QR Code that can be on the front of the printers that the guest can scan and immediately open the email to send documents along with instructions.

TTI now can provide a Desktop QR Code with the Business Center so guest can easily scan the code for instructions and open an email to send the documents to
